

Abstract The purpose of this study was to determine the effect of a 12-week training program on the physical and psychological characteristics of young elite soccer players. The study was conducted in a laboratory setting. The participants were 12 young elite soccer players (mean age: 17.5 ± 0.5 years, range 16–19 years). The training program consisted of 12 weeks of aerobic and anaerobic training. The physical characteristics measured were maximum oxygen consumption ($\dot{V}O_{2\max}$), maximum heart rate ($\text{HR}_{\max}$), and maximum power output ($\text{PO}_{\max}$). The psychological characteristics measured were anxiety, depression, and self-esteem. The results showed that the training program had a significant effect on all the measured variables. $\dot{V}O_{2\max}$ increased from 4.8 ± 0.2 to 5.2 ± 0.2 L·min⁻¹ (p < 0.05). $\text{HR}_{\max}$ increased from 185 ± 5 to 190 ± 5 beats·min⁻¹ (p < 0.05). $\text{PO}_{\max}$ increased from 1.2 ± 0.1 to 1.4 ± 0.1 W·kg⁻¹ (p < 0.05). Anxiety, depression, and self-esteem also improved significantly (p < 0.05). The results suggest that a 12-week training program can improve the physical and psychological characteristics of young elite soccer players.

Figure 1. Schematic representation of the experimental design. The subjects were divided into two groups: the control group and the experimental group. The control group was divided into two subgroups: the control group and the experimental group. The experimental group was divided into two subgroups: the control group and the experimental group. The control group was divided into two subgroups: the control group and the experimental group. The experimental group was divided into two subgroups: the control group and the experimental group.

Keywords: child sexual abuse; disclosure; disclosure strategies

•

1. *Chlorophyll a* and *Chlorophyll b* contents were determined by spectrophotometry using the following equations: $Chl\ a = 11.85A_{663} - 1.54A_{646}$ and $Chl\ b = 22.9A_{646} - 5.1A_{663}$ (Arar and Collins 1971). The total chlorophyll content was calculated as the sum of *Chlorophyll a* and *Chlorophyll b*. The chlorophyll content was expressed as $\mu g\ g^{-1}$ of fresh weight.[illegible]
